

Medication Therapy Management

Optima Medicare has a Medication Therapy Management (MTMP) program that meets the Medicare Modernization Act requirements. Our Medication Therapy Management program is approved by CMS for program year 2009. Members are eligible for Optima Medicare's Medication Therapy Management program if they have at least 2 of the following conditions:

- Asthma
- COPD (chronic obstructive pulmonary disease)
- Diabetes
- Dyslipidemia (high cholesterol)
- Heart Failure
- Hypertension (high blood pressure)

Members must also be taking four (4) or more Part D covered drugs and must be likely to exceed \$4,000 in annual costs for medications. Optima Medicare has a network of community pharmacies that provide services for members eligible for the MTMP. While this program is not considered a benefit, members eligible for Optima Medicare's MTMP can receive these services at no cost to them. Members not eligible for the program can also receive the services, but must pay the full cost to the participating pharmacy.

Please contact our Member Services for more information about our Medication Therapy Management program.
